

Tomás Pablo Korenblit

Bayesian Data Scientist & Engineer

Data scientist specializing in Bayesian inference, hierarchical modeling, and causal reasoning. Builds end-to-end systems from statistical models to production data pipelines in Python, SQL, and GCP.

Buenos Aires, Argentina | tomaskorenblit@gmail.com | +54 11 2156 1770 | GitHub | LinkedIn | ORCID

EXPERIENCE

Partner, Data Scientist & Full-Stack Engineer

Ascendancy | Jan 2026 - Present

- Architecting a network intelligence platform that maps and scores relationship paths for institutional clients targeting Fortune 500 events.
- Designed the data ingestion backend (LinkedIn, email, investment data) powering the platform's relationship scoring engine.
- Established CI/CD pipelines, development standards, and automated workflows as founding engineer of a greenfield team.

Software Engineer

Invisible Technologies | Jun - Dec 2025

- Shipped an AI-assisted design platform for reinforcement learning from human feedback (RLHF), serving 4 major AI labs including Google, Meta, and Anthropic.
- Built versioning, self-healing pipelines, and GCP integration for batch data management across campaigns.

Coding QC Analyst & AI Data Trainer

Invisible Technologies | Dec 2022 - Jun 2025

- Created validation dashboards (Looker, Python, Apps Script) for coding training data, adopted company-wide as daily QC tooling.
- Oversaw data quality across 150+ annotators in coding quality operations.

Lead Generator & Data Scientist

Klouser (B2B lead generation) | Nov 2021 - Oct 2022

- Increased daily lead generation 5x (10 to 50) building a classification-driven prospect system (Python, PostgreSQL, Scikit-learn).
- Trained a text classifier on 6,000 client profiles for automated prospect scoring; integrated billing with Xero.

BAYESIAN PROJECTS

Player Skill Estimation: Vélez Sarsfield

Argentine Football | Hierarchical Bayesian Models | PyMC | 2025

- Estimated player skill over time for a top-division football club using hierarchical Bayesian models; identified structural causes of a mid-season point collapse. Ported TrueSkillThroughTime rating library from Julia to PyMC.

Lineup Optimization: Portland Trail Blazers

NBA | Thompson Sampling | Live Experiment | 2025

- Modeled young-player development minutes via Thompson sampling for an NBA team, producing stint-based lineup recommendations. Findings shared with media analyst Tom Haberstroh.

PUBLICATIONS

Not All Instructions Are Forgotten Equal

JAIIO 2026 (ASAID) | Accepted, camera-ready in preparation | 2026

- Bayesian hierarchical ordered-logit study of how LLMs lose adherence to in-context instructions over long coding conversations; per-instruction effects span more than an order of magnitude. Open-source benchmark built on Inspect AI.

SKILLS

DATA SCIENCE

Statistical Modeling | GLMs
Causal Inference | Bayesian
Hierarchical Models | PyMC
Thompson Sampling
Regression | Hypothesis Testing

PROGRAMMING

Proficient: Python | SQL
Experienced: C++ | JavaScript
Node.js | React | Shell

LIBRARIES

PyMC | Pandas | NumPy
Scikit-Learn | StatsModels
Matplotlib | Plotly | Flask

TOOLS

Git | Docker | GCP
GitHub Actions | CI/CD
PowerBI | Vercel

LANGUAGES

English - bilingual
Spanish - native
Hebrew - beginner

EDUCATION

UNSAM (Buenos Aires)

BSc Data Science
Expected Jun 2027

BlueDot Impact

Technical AI Safety course
2026
